ChatGPT sets record for fastest-growing user base - analyst note

Quantum mechanics is a branch of physics that describes the behavior of matter and energy at the atomic and subatomic level. It describes how particles such as electrons and photons interact with each other and with energy fields, and it is the foundation of our understanding of the properties of atoms, molecules, and the fundamental particles that make up matter.

One of the key principles of quantum mechanics is that particles can exist in multiple states or locations simultaneously, a concept known as superposition. Another important principle is that the act of measurement can cause a particle's state to "collapse" into a single state or location, a concept known as wave function collapse.

Quantum mechanics also describes the phenomenon of quantum entanglement, in which two particles can become interconnected in such a way that the state of one particle can instantaneously affect the state of the other particle, even if the two particles are separated by vast distances.

Quantum mechanics also describes the properties of particles in terms of probability distributions, rather than definite positions or states. This probabilistic nature of quantum mechanics can be observed in phenomena such as quantum tunneling and quantum interference.

Feb 1 (Reuters) - ChatGPT, the popular chatbot from OpenAI, is estimated to have reached 100 million monthly active users in January, just two months after launch, making it the fastest-growing consumer application in history, according to a UBS study on Wednesday.

Sam Altman: AI won't take all our jobs

OpenAI CEO downplays workforce risk of emerging tech.

OpenAI CEO Sam Altman has downplayed the potential for the technology to take over jobs at an event in Melbourne last week, saying instead the technology will instead put "higher expectations" on human beings.

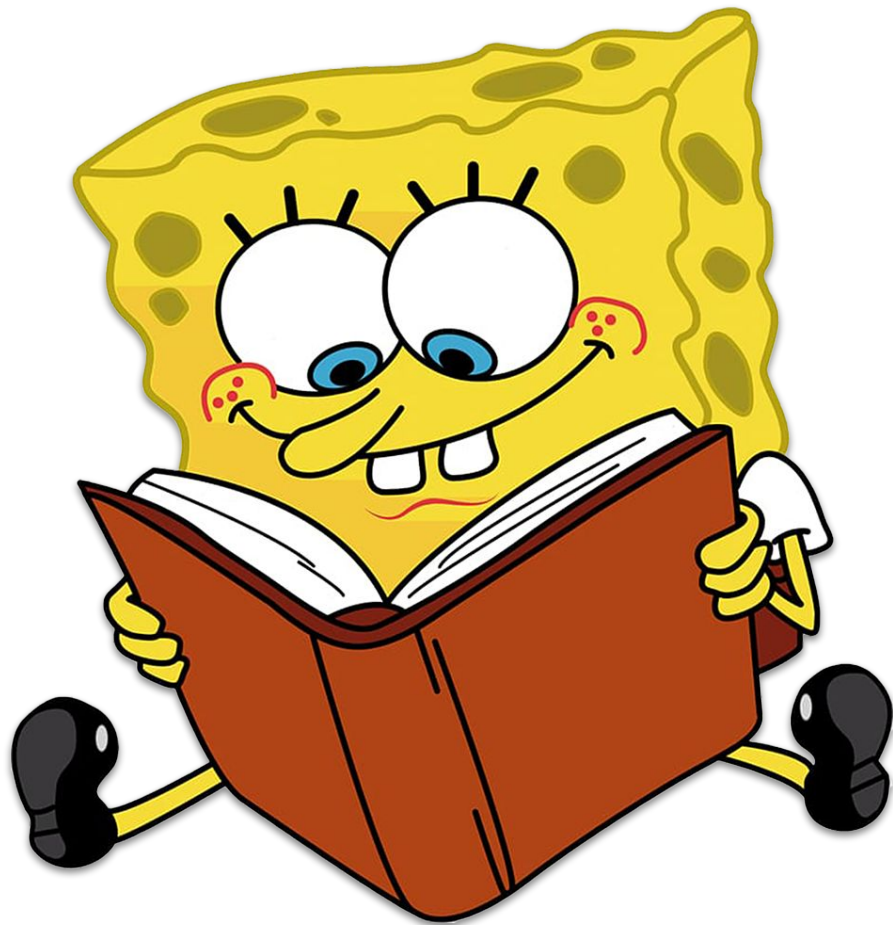

Altman has an unsurprisingly optimistic view about human nature will respond to the rise of AI, saying he doesn't think people will "sit around playing video games all day" while computers do their jobs.

The screenshot shows a code editor with a dark theme. At the top, there are five tabs: 'fetch_pic.js' (active), 'push_to_git.py', 'JS d3_scale.js', 'JS fetch_stock.js', and 'JS material_ui.js'. The main editor area displays a JavaScript function 'fetchNASAPictureOfTheDay' with the following code:

```
1  const fetchNASAPictureOfTheDay = () => {  
2    return fetch('https://api.nasa.gov/planetary/apod?api_key=DEMO_KEY', {  
3      method: 'GET',  
4      headers: {  
5        'Content-Type': 'application/json',  
6      },  
7    })  
8    .then(response => response.json())  
9    .then(json => {  
10     return json;  
11   });  
12 }
```

A blue suggestion box from GitHub Copilot is visible at the bottom left of the code editor, containing the Copilot logo and the text 'Copilot'.
